

Remote Patient Monitoring

DATASHEET

Overview

Remote patient monitoring is a solution through which patient vitals can be collected remotely and healthcare professionals can receive the trends/alerts in the real time using medical device. Care Providers can also collaborate with a common context.

RPM brings down the risk of nosocomial infections and related patient exposure while enhancing the patient's health outcomes and offsetting the need for an in-office visit.

Focus Areas

CHF (Congestive Heart Failure)

COPD (Chronic Obstructive Pulmonary Disease)

Diabetes Management

Behavioral Health

Post- Operative Patients

Capabilities

- Cloud based platform to manage patients outside hospital set-up
- Video based virtual consultation with care givers
- Mobile apps for patients and healthcare providers
- Real time risk status based on vitals and biometrics
- Advanced analytics & risk stratification
- Smart alerts
- Telehealth visit
